

A **Hu-Friedy** Company

Hu-Friedy Breakfast Symposium **EI - Endo Ingenuity, a Hu-Friedy company**

Presenter: Dr. Fred Weinstein

Obturation techniques have demonstrated as much variety as root canals themselves, flexibility is important in the tools and devices that support various techniques. The new **DownPak** cordless obturation device by EI (Endo Ingenuity, a Hu-friedy company) incorporates proprietary 3D Precision Technology, an advancement that is said to enable more precise and predictable endodontic treatment. DownPak's patented heat-plus-vibration technology optimizes the thermo-compaction of endodontic filling materials and provides truly 3-dimensional obturation of the entire root canal space. The device offers the endodontic practitioner versatility, in that it may be used with heat alone (at various settings), vibration alone, or with heat and vibration together, providing consistent and predictable results.
